

Nordhavn 56 Motorsailer

Someone once said, "The difference between a powerboat and a sailboat is the difference between running the engine 100 percent of the time and running it 90 percent of the time." Cue the Nordhavn 56 Motorsailer, a world-class passagemaker with the range of a sailboat and the comfort and convenience of a trawler. Under power alone, she has a 3,000 nm range with average speeds of 9 to 10 knots. Unfurl the sails, reduce the engine speed and adjust the controllable pitch propeller for optimum efficiency and you can go double or even triple that. Or guide her via wind power only: she can be sailed and tacked to weather with impressive performance. Add to her functionality the comfort and style of a luxurious yacht, and you've got an economical – not to mention green – way to explore your world.

Endurance 650 LRC by Hampton Yachts

The Endurance 650 LRC (Long Range Cruiser) is Hampton Yacht's newest offering and marks a significant departure in design from their well known Motor Yacht and Pilothouse models. The result of a fruitful collaboration with distinguished naval architect, Howard Apollonio, the Endurance features a hybrid hull - that utilizes the best features of both displacement and planing hulls to efficiently cruise in the 10 - 12 knot range and a top running speed of around 20 knots. The Endurance 650 is built for safe, comfortable and dependable cruising. She not only meets, but exceeds the USCG and IMO stability requirements for Commercial Open Ocean Service. And like all Hampton yachts, uncompromising craftsmanship and luxurious amenities come standard, and complement its long-range capability. The Endurance 650 LRC is designed to provide everything a discerning owner would want in a semi-custom yacht.
